Projects

1. Product Pricing Tool - Devmountain - http://koppks.github.io/finalpricetool/#/

(HTML, CSS, Bootstrap, AngularJS, Javascript, ui-router, firebase)

- Final personal project for DevMountain coding academy.
- Designed to fill business need for companies.
- Broadbased features for universal searches.

2. Gif Finder App - http://koppks.github.io/gifsearch/

(HTML, CSS, AngularJS, Javascript)

This is a simple app designed to do $http GET requests in AngularJS based on object searches.

3. Basic Chatroom - http://koppks.github.io/message/

(HTML, CSS, AngularJS, Javascript)

This is a very basic chatroom that processes $http GET and POST requests. When two people have accessed the app at the same time they can speak with each other in an instant message setting.

4. Star Wars Episode Finder - http://starwars-ertf.rhcloud.com/

(PHP, HTML) A basic PHP app that show when each episode was made.

5. Color Clicker - http://koppks.github.io/paintapp/

(jQuery) A basic app built with jQuery that allows the user to change the color of boxes by simply clicking on them. One can change the small black boxes to a different color by first clicking the tab of the color you would like to change the box to, and then left-clicking on the box. When the box is clicked it will then change to that color. One can change to another color by simply clicking a different color tab, or reset to clear out all boxes changed to that color (or to return them to black).
